DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 35-49 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-13 of U.S. Patent No. 6,469,123. Although the conflicting claims are not identical, they are not patentably distinct from each other because for the following reasons:

(1) Claimed thermosetting monomer of the reference is included in the instant claim 35, a low dielectric constant polymer comprising said thermosetting monomer,.

(2) claim 11 of the reference does disclose "wherein at least one of the aryl, the branched aryl, and the arylene ether has a triple bond;" but does not disclose a further requirement from the instant claims ---that participates to form at least part of the polymer---, However, based on chemical structure of said thermosetting monomer, this characteristic must be considered inherent in the prior art ,

Art Unit: 1711

(3) the only difference between claim 45 of the instant claim and claim 13 of the reference is the center atom, a Carbon in the reference has been replaced by a Si in the instant claim 45. However, they are equivalent since they all require four covalent bonds.

Therefore, it would have been obvious to one of ordinary skill in the art to modify the monomer from the reference within the limitation of the instant claims, based on the same functionality, since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said modification.
